

2007

December 15, 2007

Storms early in the week deposited another 36 cm of snow across the early and later parts of the week. Flurries at the end of the week brought 5 cm more of goose down, bringing the total snowpack up to 170 cm now. Skiing was excellent all week and much of the terrain is already well covered.

November 26, 2007

Winter is back at Powder Creek. Last week we enjoyed some fabulous early season skiing thanks to our 100 cm snowbase at lodge elevation. More snow is arriving!

April 16, 2007

A great season ended with 51 cm of new snow during our last week at Powder Creek. No doubt, last Wednesday and Thursday skiing powder under a blue sky were the highlights of the week. Still snowing up there...

March 21, 2007

A week of blue skies and sunshine and great spring touring conditions ended Sunday with 20 cm of new snow. Average high temperature for the week was +8c, average low temperature was -8c. Total snowpack is 302 cm.

March 18, 2007

Mixed conditions this week. Started out with a nasty rain crust on Monday that got buried over the week by 73 cm of new snow. Temperatures went from -18 C early in the week, to above freezing when we flew out March 18. More snow and cooler temps are around the corner. Total snow pack 290 cm.

March 12, 2007

YIKES. A week of great skiing came to a brutal end when the "Pineapple Express" hit us on Sunday. Before the rain hit we received 30 cm of new snow overnight. The cold front is moving through right now, keeping our fingers crossed it will come with some snow...

February 25, 2007

We received 60 cm of new snow last week. Unfortunately most of this came in with horrendous winds early in the week which caused snow stability to go down the drain. The healing process started later in the week and we were able to ski some fine lines. Total snow pack is now 270 cm (9 ft).

February 12, 2007

Despite only 13 cm of new snow last week, it was another great week at Powder Creek. Last weeks guided group did first guided descents on Hidden Bowl from the ridge, skied a huge run in East Campbell they called "R factor" and did a tour around Mt. Freya where they skied a few couloirs into Campbell. Amazing that after skiing here for 11 years now we are still exploring new ski descents. Total snow pack is 228 cm.

January 28, 2007

Jan. 28, 2007At the beginning of last week we had 41 cm of new snow, then it warmed up and snow stability went down the drain. Cooler temperatures returned and snow quality was great again with lots of sunshine. Total snowpack is 231 cm.

January 21, 2007

The week started out cold and sunny before finishing off with a couple of days of new snow. The excellent traveling conditions allowed us to tour to the Attic via Skylight and to circumnavigate Mt Freya via Little Joe Lakes and Campbell Creek. Total new snow for the week was 43 cm and total snowpack is now 242 cm.

January 13, 2007

A series of big storms blew through the area bringing piles of new snow to Powder Creek, a whopping total of 107 cm! Total snowpack is now at 250 cm, the highest we've seen at this time of year since we've been operating. The greatest snowfall was on Jan. 6th when 30 cm fell. Average max temps for this period were -6.5 degrees Celsius, and average minimum temps were -12.

January 01, 2007

We reached a 200 cm snow pack by Christmas day – the last time this happened was in 1998. Today the settled snow pack is 194 cm and more snow is on the way tomorrow. We've already been to the North Face, the Attic, Visa, and Campbell Soup – the coverage is excellent and the traveling has been very good. A Happy New Year indeed!
